

- Power to Stepper CL

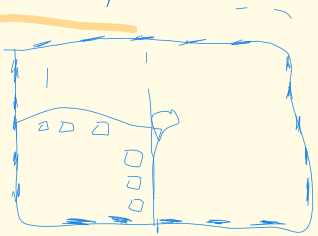

Microcontrollers
- Aarit

Positioning
- Francis?
- Sherzaar

Statemachine
- Prag
- Dev
- Kushal

Test Plan
- MLFQ
  - Priority/Dependency
  - Microcontroller Lan
  - State machine
  - Positioning
- Alternate in terms of priority
- If testing complete/time allocation exceeded (5x priority)
- Put relegated tasks on priority level
- If no testing complete in 15 minutes get bumped up on priority level
- ↓ High
- If equal priority, shortest job first

Test Arena Setup

Idea: Do just our corner

↳ Maybe markers for half the arena for detection of markers

Breakdown of tasks

State Machine
- Can move to corner
- Timings / State switching
- Picking up boxes + movement (PID Controls, Microcontroller)
- Can it hold boxes / release
- Knocking ⇒ low priority

Positioning
- See markers
- Encoder pos
- Camera pos (640 FOV)
- Combination using Kalman filter (Yet to be coded)
- Random positioning testing
